

WG3 TODAY

Towards final protocols

- Is it clear?
- Is it doable?
- Does it capture the richness?

WG3 TODAY

Towards final protocols

Special attention for the Process Protocol

- Not yet crystalized
- Important to fix some elements

PROCESS

Several questions to fix:

- Whom there?
- What steps?
- Which ones before and which ones during?

PROCESS

My interpretation so far:

- Planners/strategy makers
- Preferably from more than one domain

PROCESS

My interpretation so far:

1. Formulate planning goals and discuss how the acc. Instrument needs to be defined to help answer that (what kind of output, which elements, related to boundary of instrument).
Pre-define some relevant interventions concerning this

PROCESS

My interpretation so far:

2. Map the chosen accessibility for the region at hand and create understanding of what it means
3. Develop interventions (or show effects of a set of pre-defined interventions)
4. Develop (integrated) planning strategies

PROCESS

My interpretation so far:

- Step 1: in a pre-session (maybe with e-mail exchange or physical)
- 4 weeks later: the workshop itself
- Step 1 then also serves to answer several context questions and the pre workshop survey

PROCESS

Who disagrees and offers a different proposal?

PROCESS

How much do we want to standardize each step?

How to finalize this before

USABILITY

Form and content of the different measurement protocols?

Questions raised by Carey.

USABILITY

Form and content of the different measurement protocols?

Questions raised by Dimitris.

USABILITY

Focus group

- How long?
